This one-day workshop explores the impact of executive function skills on student learning and doing. Participants will learn how to identify and apply practical strategies for developing and shaping the brain’s “air-traffic control system” by creating comprehensive learning environments that promote engagement, accessibility, and self-efficacy for all students through the explicit teaching and support of executive function skill development.

Workshop participants will leave able to:

- Answer the question, what is executive functioning and why is it important in my classroom?
- Evaluate learning environments, lesson plans, and classroom activities to improve engagement and maximize the opportunity for students to learn and practice executive function skills.
- Implement practical strategies for teaching students how to develop, monitor, and adjust both short- and long-term goals.
