

# NGSS Administrator Implementation Support

This professional learning will prepare both elementary and secondary administrators and district level personnel to lead their district or school site in the equitable implementation of the Next Generation Science Standards (NGSS).

Participants will learn about the instructional shifts that need to exist to support the implementation of 3-dimensional learning for students, and what structures administrators need to put in place at their school sites to support NGSS implementation.

Administrators will get to experience an NGSS lesson format, enabling them to know what to look for in an NGSS classroom, as well as how to better support teachers throughout the NGSS implementation process.
